

engage

Empowers Patients to Participate in Their Own Healthcare.

Orion Health Engage empowers patients to actively participate in, and contribute to, their health record and care plans. Patients are encouraged to actively self-manage their well-being, access their health information and interact with their care team. Through leveraging aggregate data sources, patients, clinicians, and care providers have instant, anytime access to a patient's health record to support and enhance patient self-management.

There has been a shift in healthcare management from care being delivered solely in hospital and provider organizations to increasing levels of care provided in the community. With this move in managing episodes-of-care, the relationships between providers, patients, and their families are changing. Effective care delivery demands coordination across multiple providers of care while keeping the patient firmly at the centre of their healthcare.

The ability to engage patients to be active in self-management and care delivery includes the effective sharing of information. The patient's health record needs to be readily available to them, their families, and their care team members. Patients can achieve their health goals with a collaborative approach taken between themselves and their care team.

The Engage and Coordinate solutions provide a rich set of health information to the patient and carers, including laboratory results, medications, medication schedules, appointments, documents, and notes. Orion Health's Engage also encourages collaboration through Circle of Care functionality, a single place where both patients and providers can view who is involved in the patient's care and how to get in contact.

Engage also enables patients to contribute to their health record and keep their wider care team informed by updating progress against their Care Plan as well as review and complete online questionnaires. Finally, the care team can curate and share libraries of patient educational material to help ensure patients have access to accurate and appropriate information to support their understanding of their condition.

Benefits of Engage

Building stronger connections between the provider and patient

Engage builds stronger connections and communication between different members in a patient's Circle of Care, including providers and a patient's friends and family. The ability to contribute patient-centred information to the system allows everyone involved in a patient's care to stay informed and connected.

Empowering patients

Engage empowers patients to actively participate in and contribute to their ongoing care and personal health record. With the Engage web applications, patients can access their health record data from anywhere, add and edit information. Patients can view their complete holistic health record, either from their home computer, tablet or mobile.

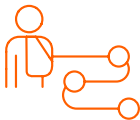

Improve knowledge and understanding of their health

By helping patients to add to and better understand their health record and actively participating in their healthcare plan, this helps to improve the patient's awareness and understanding of their conditions and empower them to be more engaged and active in self-care. With the Health Library, patients can receive informative and educational content relevant to their conditions.

Providing a single source of information

Engage is fed by real-time data from the Amadeus platform, and integrates with Coordinate to support and enhance patient self-management. Engage enables the patient's care team to support them by having access to documentation, wellness goals, a health library, medication lists, laboratory results and more, all from a single, easy-to-access source of truth.

Track a patient's health progress

Patients and providers can set goals within Engage as part of their healthcare plan. Being able to see what action is required to achieve these goals and tracking a patient's progress can help patients stay on track and improve their health.

Saves precious healthcare resources

Being able to view and update patient information inside the Engage app allows patients to manage their healthcare in their own home. This can drive down the need for costly doctors' visits, saving both the patient and the health system.

Key Features

Appointments and notifications

Patients can view past and upcoming appointments. Leveraging Orion Health's configurable backend, dates can be pulled from multiple scheduling systems, and notifications sent when appointments are added or changed. Patients can receive email-based external notifications and reminders to help them stay on top of important health record updates.

Goals for Patient Portal

Care Plan enables an individual to set and manage specific goals. It outlines actions necessary to achieve those goals, issues they may encounter or concerns they may have. For each goal, progress can be captured, displayed and tracked over time. Circle of Care members can track progress against a goal, which can be filtered to show which goals have been achieved and those that are still in progress.

Clinical document exchange

Patients have direct access to their clinical documents containing relevant information. Users can view and download PDF and C-CDAs documents which contain important information such as vital signs, allergies, adverse reactions, alerts, medications, problem lists, procedures, laboratory and radiology results and discharge information. Users can also receive automatically generated informative and educational content relevant to their condition, their medications, laboratory tests and other results.

Patient questionnaires

The Questionnaires functionality offers a powerful tool that allows care providers to assess patient risk, measure patient experience and outcomes, perform regular assessments for chronic care pathways and easily assign questions to patients to provide them with improved support.

Future-proof your journey from Population Health to Precision Medicine

Every step you take towards delivering personalized healthcare is valuable. Our end-to-end solution, built on our Amadeus platform, with inclusive real-time analytics, clinical, and patient engagement applications, will future-proof your journey.
