

enterprise clinicals

A comprehensive suite of modules for the creation, management and presentation of clinical information.

Orion Health Enterprise Clinicals provides instant access to up-to-date information through a web-based portal that allows clinicians to view, create and manage accurate clinical information.

From diagnostic ordering to clinical documentation; Enterprise Clinicals allows clinicians to not only view medical information, but to also complete a range of tasks such as ordering tests and medications, completing problem lists and alerts and signing off results. The consolidated view of patient information allows clinicians to view a high level snapshot of information, drill down into both current and historical records, then complete a range of tasks. The solution captures and displays information from across systems and departments to ensure the right information is available at the right time - improving decision making and helping with patient outcomes.

A highly configurable suite of modules, Enterprise Clinicals is deployed with best practice workflows, that can be customised and configured to meet individual clinicians' needs. Through a streamlined deployment

method, organisations can experience value quickly and efficiently. Modules can then be added to over time as the organisation requires, and the solution can be extended beyond the walls of the hospital into the community.

The solution includes a comprehensive Electronic Medical Record that allows clinicians to view diagnosis history, medical history, problem lists & allergies, active medication a patient is on, any clinical documentation and results. It facilitates CPOE orders across laboratory, radiology, medications, surgical procedures and other ancillary services. And has built-in clinician decision support for outpatient, inpatient and surgical departments. With robust integration across Pharmacy, Radiology, Laboratory systems and other 3rd party applications, Enterprise Clinicals is a true source of truth for clinical information.

Benefits of Enterprise Clinicals

Global reach, local touch

Orion Health brings 25+ years of global healthcare experience and capabilities to each and every customer, without compromising on the local touch required for successful delivery and support. Our robust global experience, combined with our local and regional implementation workforce, means we are equipped to seamlessly manage the nuances of culture and language.

Real-time view of information

Physicians have quick access to accurate and timely clinical information through a web-based portal that can be accessed on desktop or mobile devices. Seamlessly integrating across departments and third party applications, Enterprise Clinicals provides a consolidated view of information that allows clinicians to make better, more informed decisions.

Designed for users

With pre-configured best practice workflows, an easy to use interface that reduces user learning curves and the ability to customise the solution, Enterprise Clinicals is designed specifically for the individuals using it. With seamless integration across disparate sources, Enterprise Clinicals connects across systems and departments and allows users to access information instantaneously on web or handheld devices.

Flexibility

We understand that not all healthcare organisations are built the same. As well as possessing a pre-configured best practice solution, Enterprise offers flexible workflows to support various scenarios and ensure the most optimal operation for your organisation. The solution is also highly scalable and can be used by smaller individual hospitals, as well as large hospital groups in a single, multi-site instance, ensuring suitability today and into the future.

Integrated

Seamless integration with legacy and third-party systems, using common industry-wide technology and standards, means the solution connects across systems and departments and allows users to access information instantaneously. So, the right information is available at the right time.

Multi-site enabled

Enterprise Clinicals provides multi-site functionality that allows for the deployment of a single instance across multiple sites or facilities – allowing hospital groups to operate in a centralised or hosted environment, including the cloud if required.
