# enterprise patient administration

A streamlined patient administration system that supports the seamless flow of patients throughout the health system.

Orion Health Enterprise Patient Administration optimises hospital administrative functions, supports clinical workflows and streamlines the patient journey through the health system – from the community to the hospital and beyond.

From capturing patient demographics, facilitating appointment booking and optimising patient discharge, through to departmental management; the solution captures and displays information from across departments to ensure the right information is available at the right time. Assisting organisations in providing a more patient-centric journey throughout their health system.

Enterprise Patient Administration supports paperless, integrated workflows to help improve information integrity, reduce transcription errors and duplication of information entry, and optimisation of patient and report turnaround time. Deployed with best-practice workflows,

users can configure and customise to suit their needs - including specialist forms, rules and workflows. A high level of reporting and analytics allows organisations to produce better-quality reporting and refine processes as required. While highly configurable, Enterprise Patient Administration drives toward simplicity over complexity.
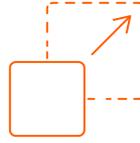

This modern, scalable solution provides robust integration and sharing of administrative and clinical information between existing and new systems. Users can access information within and across different departments. And 3rd party applications can integrate to the solution easily.
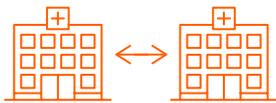

Benefits of Enterprise Administration

Designed for users

With pre-configured best practice workflows, an easy to use interface that reduces user learning curves and an ability to customise the solution, Enterprise Patient Administration is designed specifically for the individuals using it and is flexible enough to meet different users needs.

Scaleable

Through a streamlined deployment method, organisations can experience value quickly and efficiently with Enterprise Patient Administration. Modules can then be added to over time as the organisation requires, and the solution can be extended beyond the walls of the hospital into the community.

Multi-site enabled

Enterprise provides multi-site functionality that allows for the deployment of a single instance across multiple sites or facilities – allowing hospital groups to operate in a centralised environment with common configuration and information sharing. Enterprise can also be deployed in a hosted environment, including the cloud if required.
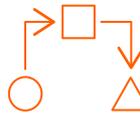

Integrated

Seamless integration with legacy and third-party systems, using common industry-wide technology and standards, means the solution connects across systems and departments and allows users to access information instantaneously. So, the right information is available at the right time.

Global reach, local touch

Orion Health brings 25+ years of global healthcare experience and capabilities to each and every customer, without compromising on the local touch required for successful delivery and support. Our robust global experience, combined with our local and regional implementation workforce, means we are equipped to seamlessly manage the nuances of culture and language.

Flexibility

We understand that not all healthcare organisations are built the same. As well as possessing a pre-configured best practice solution, Enterprise offers flexible workflows to support various scenarios and ensure the most optimal operation for your organisation. The solution is also highly scalable and can be used by smaller individual hospitals, as well as large hospital groups in a single, multi-site instance, ensuring suitability today and into the future.

Key Features

Administration

- Patient registration
- Master patient index
- Referrals
- Wait lists
- Scheduling
- Admissions
- Bed management
- Visit management
- Clinical coding

Departmental management

- Inpatient management
- Outpatient clinic management
- Surgical management
- Emergency care management

Simplifying processes, driving greater organisational efficiencies and improving patient outcomes.
