

Coordinate

Coordinate is a comprehensive population health product that enables clinicians to collaborate, proactively manage care, and take preventative action.

Use lists to manage patients with Collaborative Worklists

Create care plans with patient-centered goals, observations and actions

Create a Circle of Care with family, care team and organisation members

Use Medication Management to track patient medications

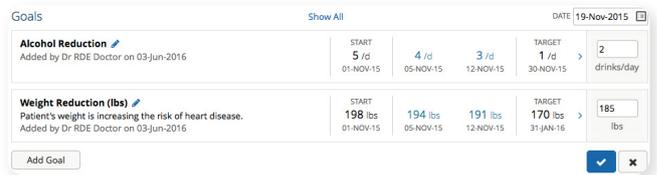

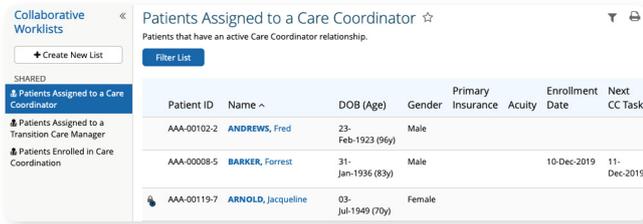

Use pre-defined Care Coordination and Transition of Care care pathways

Use Problem List to track diagnoses, allergies and alerts

Orion Health Coordinate is a comprehensive population health product built on top of Orion Health Amadeus. Through seamless integration with Care Pathways, Problem List, and Medicines, Coordinate enables complex clinical pathways, care planning, medication management, and patient engagement.

Key Features

Lists

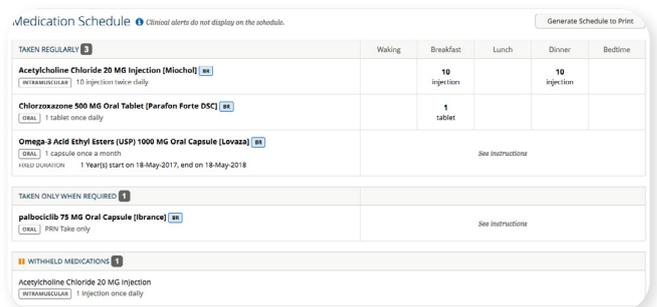

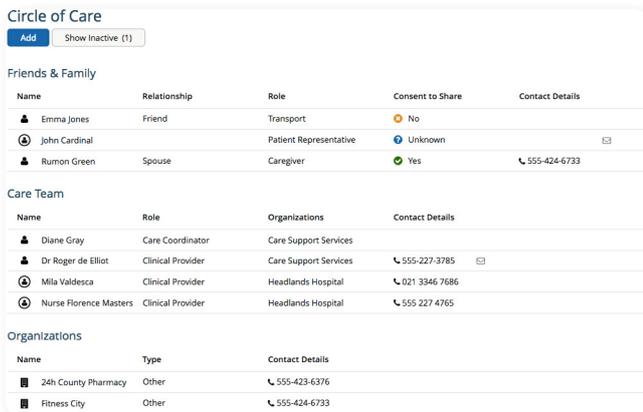

Patients, semantically grouped by common characteristics, can be presented and added to a list using Collaborative Worklist that then can be shared by one or more users. Some of the pre-defined lists:

- Unconfirmed Patients (by pathway)
- My Patients – Not Enrolled (by pathway)
- My Patients – Enrolled (by pathway)
- Recent Patients

Care Plan

A care plan consists of a range of information about a patient needs:

- Goals and corresponding observations are used to identify the measurable targets to achieve and track progress.
- Actions provide the patient with the “how” they will achieve the associated goal.

Circle of Care

Circle of Care represents the full spectrum of participants involved in a patient’s care. Participants are curated and organised according to the following categories:

- Friends and Family
- Care Team
- Organisations

Medications

A key element of Care Coordination and management is ensuring that the patients are adhering to medication plans and not suffering from any medicine contraindications. Updating the medications list can be configured in two ways:

- Not shared back into the medical record.
- Shared back into the medical record and highlighted as ‘unverified changes’.

Patient Tasks

Show: All **Unresolved**

For: **You** Everyone

Group By: Due Date

▼ Today

- Medication **Due 4 weeks ago** ▶
Assessment
Care Coordination

Review by Rachel ANDERSON 08-Feb-2018 09:13
Review of problem complete.

Created by Rachel ANDERSON 08-Feb-2018 09:10

INFORMATION SOURCE Patient

ONSET At Age 25 years

AGENT/SUBSTANCE NAME Salicylate (substance)

CERTAINTY Certain

CRITICALITY Low Risk

REACTION TYPE Adverse reaction

MANIFESTATIONS Facial swelling - Mild (Added)

Care Pathways

Coordinate uses the following Care Pathways features:

- Forms tools (design and display)
- Rules builder
- Tasks

Coordinate includes two pre-configured pathways that demonstrate the capabilities of Care Pathways:

- Care Coordination
- Transition of Care

Problem List

The use of Problem List in Coordinate supports the documentation of problems at three levels:

- Alerts; such as Barriers to Care, Legal, Administrative
- Adverse Reactions; such as drug, environment and food
- Diagnoses; such as nursing and medical

Benefits

The right information, at the point of care

Coordinate provides the tools to turn aggregated information into action, monitor a cohort of patients using a variety of lists, individualise a shared Care Plan with defined goals and actions, view and manage relationships and support care teams for the patient, and follow defined care pathways specific for that patient. This helps to improve communication, time management and remove duplication of effort.

A multidisciplinary approach to care

The use of a Care Plan through Orion Health Coordinate allows members of a patient's care team (Circle of Care) to securely communicate, create and assign tasks, receive alerts and monitor a patient's progress. This helps to improve team efficiency, and makes truly integrated care possible.

Monitor patient medications

Seamless integration with Orion Health Medicines draws medication information from across the health system. This enables users to curate an up-to-date medicines list that can be shared with the care team and provides the patient with a Medication Schedule. Information sources can include prescribing across acute, primary, dispensing information, claims and patient-generated information about adherence and over-the-counter medication. Reducing medication-related harm is a critical component in supporting improved outcomes and lowering the cost of care.

Easily identify at-risk patients

Tight integration with Discover simplifies the process of transforming insights from population health analysis into meaningful care coordination initiatives. Users can organise a cohort of patients that can be monitored and accessed by those responsible for caring for them. This helps to get at-risk patients timely support and leads to improved health and financial outcomes.

Rapid deployment

Coordinate integrates seamlessly with the Orion Health Amadeus platform in a standard package to deliver complete population health management. This enables easy and rapid deployment, so care teams can start to realise the benefits of improved care coordination.

Support patient engagement

Paired with Orion Health Engage, Coordinate provides easy and effective patient engagement. This encourages patients, with the help of their clinician, to set their care goals, identifying the tasks and actions they need to perform to achieve their goals. Key clinical information is provided from the Amadeus platform, such as lab results and current medications. Promoting patient self-management is beneficial, as patients are the most underutilised resources in healthcare today.

Future-proof your journey from Population Health to Precision Medicine.

Every step you take toward delivering personalised healthcare is valuable. Our end-to-end solution—built on our Amadeus platform with real-time-analytics, clinical, and patient-engagement will future-proof your journey.
