Digital Care Record

Taking an integrated and multidisciplinary
approach to patient care

Orion Health's Digital Care Record is an integrated platform that consolidates patient data across care settings.

Digital Care Record provides the means to bring health and care data together from across the healthcare sector into one single view. This enables authorised healthcare professionals that contribute to care, from clinicians in hospitals, and primary care, through to social care and beyond to see just what they need at the time of care.

Our technology enables health and care information to be aggregated from almost any source, storing data messaged through traditional HL7 messaging, legacy integrations or using modern FHIR APIs that pull data in real-time. This can then be aggregated, and normalised and information is then displayed from today's systems and any of those that are put in place in the future.

We take this a step further by providing a Single Sign On from a vast number of EMRs and specialised care systems, into our Clinical Portal.

This provides a means for care professionals to gain access to the patient record within our solution, quickly, efficiently, and most importantly safely from the system, the user is familiar with, letting clinicians get on with the important part of their job, caring for the patient.

Once a digital care record is in place, it becomes a great foundation on which to build additional capabilities, such as population analytics, and care coordination use cases where patients and their needs can be identified and catered for across the care sector.

WHAT SETS OUR tech apart

**AGGREGATES, NORMALISES
AND DISPLAYS** health and
social care data in real-time

Enables **POPULATION HEALTH
MANAGEMENT** with the ability
to integrate analytics and care
coordination tools

FLEXIBLE AND ADAPTABLE
so you can add capability and
functionality over time

Follows the **LATEST
INTEROPERABILITY
STANDARDS** and meets
jurisdictional requirements

WHY YOU'LL LOVE our tech

Complete access to a longitudinal patient record

Clinicians can rapidly access a comprehensive patient record in a single consolidated view, with data integrated from different source systems. This reduces time wastage, increases efficiency and can lessen clinician cognitive burnout.

Streamline care coordination

Leverage high-quality aggregated data to provide care teams with actionable information to simplify care coordination and transition of care processes.

Reduce paper processes and improve collaboration

By digitising key clinical workflow processes, care teams now have improved access to information and optimised usability, eliminating unnecessary paperwork.

Enable effective patient engagement

Paired with Orion Health's Digital Front Door, patients are empowered to be active and engaged participants by providing them with access to their health data, care goals, tasks and actions they need to perform to achieve their health outcomes.

Improve clinical safety

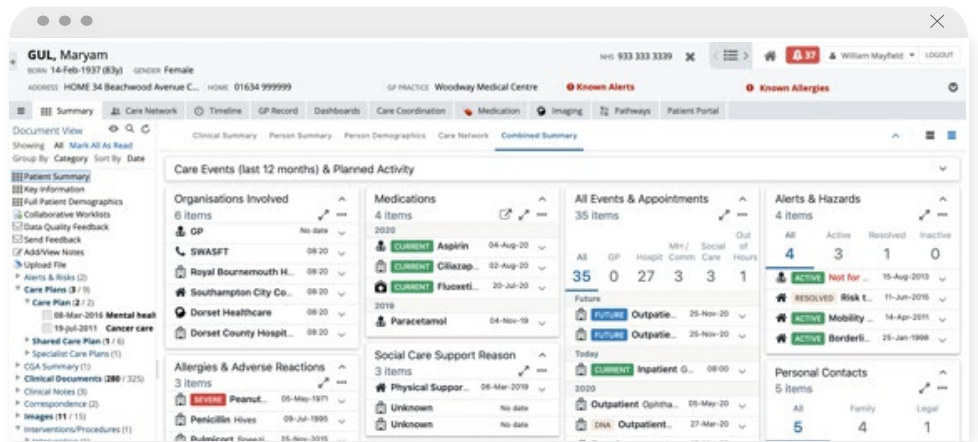

Providing clinicians with the right information at the point of care with a single source of truth for medications, integrated from many sources across acute, primary, and community care settings.

Enable better population health management

Healthcare organisations can derive future value from capturing and storing huge amounts of data from health and social care sectors, as well as having access to all patient data types in a single view.

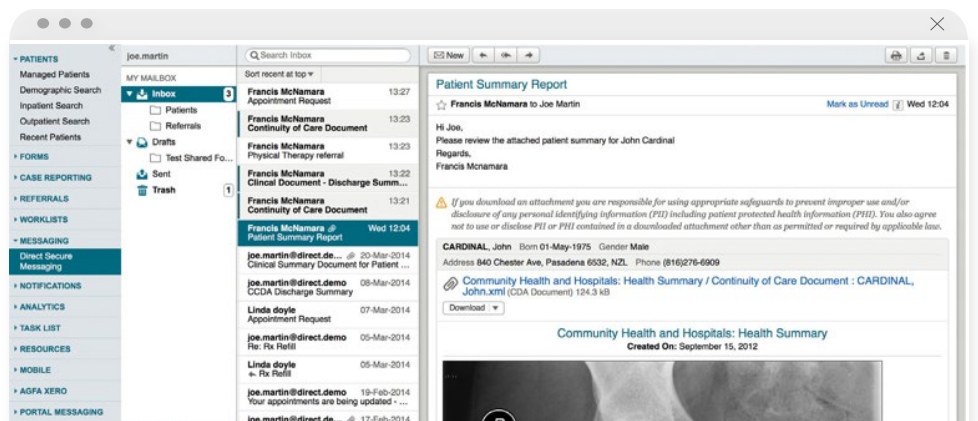

Clinical Portal

- A single view of all patient data in one place
- A unified interface to access and view a longitudinal patient health record
- Infinitely configurable access to content, applications, third party system

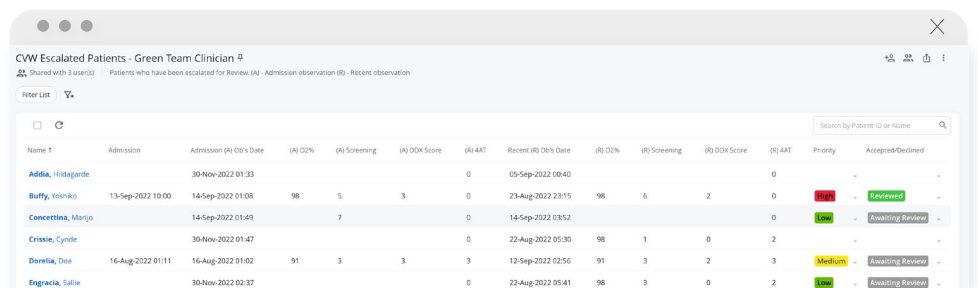

Direct secure messaging

- Send secure health information directly to trusted recipients over the internet
- Maintains patient privacy and confidentiality

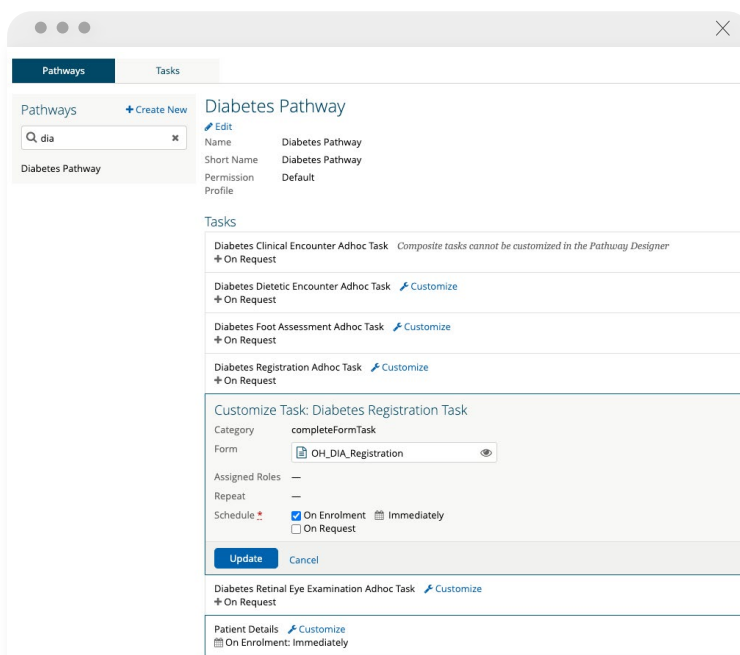

Collaborative worklists

- A patient management tool that supports effective and efficient clinical workflow
- Enhances clinical workflow by removing paper patient lists and spreadsheets
- Facilitates better collaboration between care teams and ensures that no patient falls through the cracks

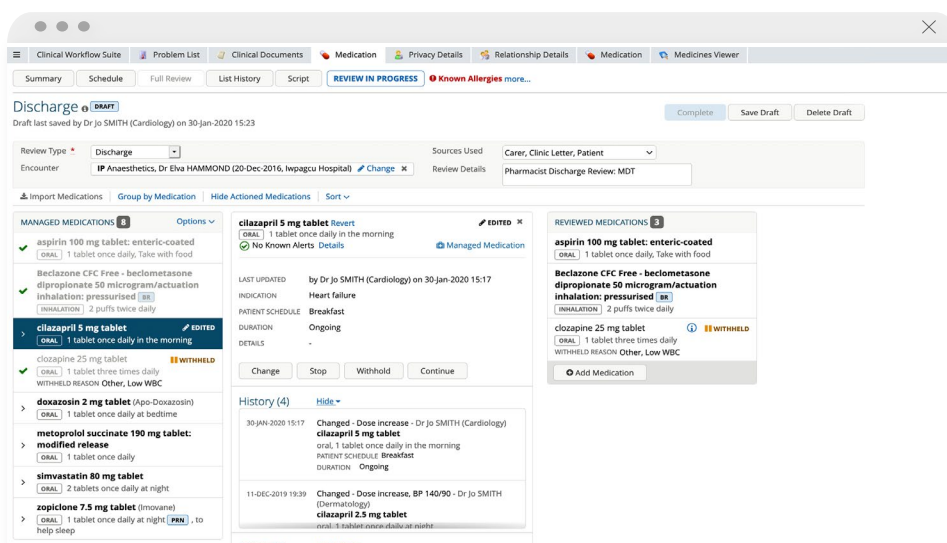

Care pathways

- Provides clinical, administration and patient-focused tools to manage and optimise patient care
- Enables management of simple, local clinical workflows to chronic care patients being treated across multiple providers

Medication Management

- Intuitive workflow tools to safely manage a patient's medications as they transition between care settings
- Facilitates reconciling and prescribing medications on admission, discharge and within outpatient clinics
- Promotes medication adherence and reduces medication errors

Orion Health and HEALWELL AI are joining forces to revolutionise healthcare with AI-driven, data-powered solutions. Together, we're setting a new standard— enhancing efficiency, improving patient outcomes, and empowering healthcare providers worldwide.
