

Find information already documented in the record

Quickly surface linked patient information through traceable, clinician-led search, summarisation and review.

SMARTSuite by Orion Health and HEALWELL AI brings together AI-enabled information management tools that help healthcare professionals find, organise and review patient information within the systems they already use.

Powered by the DARWEN™ AI engine, SMARTSuite makes clinical information searchable, helping clinicians navigate fragmented documentation and quickly access information responsive to their search. Every result links back to its underlying source, supporting traceable, clinician-led review.

Built on open interoperability standards including HL7 v2, FHIR R4, C-CDA and SMART on FHIR, SMARTSuite can be embedded within Orion Health's clinical viewers or integrated into third-party systems, without requiring data migration.

WHY SMARTSuite?

- **Information clinicians need, easier to find.** Surface and review information across unstructured data, clinical notes, reports and systems, with links to source documentation.
- **More time for patients.** Reduce time spent navigating systems and searching clinical documentation.
- **Evidence-backed AI.** DARWEN™ AI is backed by 9+ years of research and 47+ peer-reviewed publications across 11+ clinical domains.
- **Proven in deployment.** SMARTSummary has been deployed through Canada Health Infoway initiatives across multiple provinces.
- **Deep digital health expertise.** Orion Health brings 30+ years of experience, combined with HEALWELL AI's DARWEN™ AI engine and peer-reviewed clinical research.

SMARTSearch

SMARTSearch applies semantic search to the unstructured clinical documents available to the user in Clinical Portal, so clinicians can search using clinical language, abbreviations and shorthand.

- Search in clinical language: “recent MRI reports” or “echo reports mentioning stenosis”
- Retrieve documented information from across the record available to the user
- Locate documented detail that keyword search alone can miss
- No need for technical syntax or multiple logins

Benefits for clinicians and systems:

- Less time skimming documents
- Faster orientation to an unfamiliar record
- Every result linked to its source document

Best for: Clinicians who need to locate specific information in a patient’s clinical documents, from preparing for an appointment through to acute review.

SMARTSummary

SMARTSummary organizes the unstructured content of the selected records into a single summary, with transparent links back to the underlying source records.

- Support preparation of discharge summaries, referral letters and handovers
- Summaries scoped by the user, by time period, document type and author
- Presents documented information such as allergies, recorded results and reported history, always linked to source

Benefits for clinicians and systems:

- Reduces administrative load
- Faster orientation to a long record
- Every statement linked to source

Best for: Teams reviewing patients with long or fragmented documentation.

SMARTIdentify

SMARTIdentify analyses longitudinal patient records against criteria selected by the user or their organisation and presents the matching records, with the supporting source text, for independent assessment by qualified clinicians.

- Bring together unstructured record data available to the organisation
- Generate source linked patient lists based on documented criteria
- Present every match with the supporting information from the patient’s own record
- Support population level cohort planning, reported separately from individual patient review

Benefits for clinicians and systems:

- Earlier clinician review
- Source traceable matches
- Supports population planning

Best for: Population health teams and specialists reviewing cohorts against clinically agreed, guideline based criteria.

SMARTIdentify, powered by DARWEN™ AI, is a separate product with its own intended purpose, functionality and regulatory assessment. SMARTIdentify functionality is not part of SMARTSearch or SMARTSummary.

FIND OUT MORE AT // [ORIONHEALTH.COM](https://orionhealth.com)

Orion Health, a HEALWELL AI company, is a global healthcare technology company with 30 years in digital health. We work with health and care organisations to connect health information across systems, settings and regions, and to make it usable by the people delivering care. Our tools present documented information for clinician led review supporting better coordination across the health journey.

The intended purpose of SMARTSearch and SMARTSummary is to support the retrieval, organisation, summarisation and review of information already contained in patient records. They have no direct medical purpose and no direct impact on the diagnosis, treatment or management of an individual’s disease, disorder, abnormal physical state or symptoms. They do not determine clinical relevance, importance, urgency, risk, diagnosis or required clinical action, and they do not diagnose, screen, monitor, predict, triage or prioritise patients, calculate risk scores or generate clinical recommendations. They do not guarantee that all information in a patient record will be identified, retrieved or included in search results or summaries. Healthcare professionals remain responsible for reviewing the underlying source documentation and for all care decisions. SMARTIdentify is a separate product with its own intended purpose and regulatory assessment.
