

KEYSTONE HEALTH INFORMATION EXCHANGE (KEYHIE)

How can a future-proofed, health-centric platform grow and evolve with your needs?

Better care through better information

The Customer

Founded in 2005, KeyHIE, a Geisinger led corporation, is one of the nation's largest and most advanced HIEs serving a population of 6.8 million people, connecting data from over 560 health organizations, across an area spanning four states.

The Challenge

KeyHIE needed an integration platform with the:

- Ability to scale to meet its growing data management needs
- Flexibility to take advantage of innovation, integration and analytics to maintain its position as an industry leader

The Solution

Orion Health provided a comprehensive health-centric solution to address KeyHIE's challenge:

- A flexible, future-proofed Digital Care Record that can be easily scaled to integrate any data type or size and share data with third party applications
- A clinical data repository system which manages and consolidates the trove of information from across multiple sources, on-site or in the cloud
- A Clinical Portal user interface that highlights key data while having depth and flexibility to enable simple and complex decision making

The Results

The implementation of Orion Health's technology yielded impactful results for KeyHIE, including:

- A scalable Digital Care Record bringing together data from 560 health organizations into a single Clinical Portal
- Better care through better information by providing essential point-of-care decision support
- Powerful analytics by feeding extensive data to analytics engines and performing high-value predictive analytics
- "Future-Proofing" helping KeyHIE integrate new data sources and third party applications to constantly stay relevant in the market and support their growth

What's next for Orion Health

Building on our 30+ years of integration experience with our client base, including our ongoing relationship with KeyHIE, Orion Health has expanded its solution offering, launching our recently unveiled **Orchestral Health Intelligence Platform (HIP)**, a health-centric solution to acquire and analyze data for individual, cohort and population health management. This technology will be poised to support Health Systems, such as Geisinger, on their data management journey and to extract value from their data to improve outcomes within their healthcare ecosystem.
